Manual v1.1

## Combined Overcurrent and Earth Fault Relay

## Features

- 3 stages phase overcurrent and earth fault
- IDMT and definite time
- Thermal overload protection
- Trip circuit supervision
- RS232 and RS485 MODBUS-RTU communication
- Fault, alarm and event records with timestamp
- Disturbance records
- Inrush blocking
- CB Maintenance
- Multi-shot autoreclose
- Negative sequence overcurrent
- Circuit breaker open/close control
- Programmable LED

# 1.0 Introduction

The purpose of this manual is to provide information necessary to install, operate and maintain the Mikro MK3000L relay.

MK3000L provides protections for 3 independent phase overcurrent elements and one non-directional earth-fault element. All these elements are connected to the current transformers of the feeders to be protected. There are 2 sets of current inputs, for 1A and 5A rated CTs.

The relay comes with liquid crystal display (LCD) with 2 x 16 back-lit alphanumerical characters and 7 LEDs in which 4 of the LEDs are programmable. An 8 button keypad can be used to access all measurements, alarm or trip records and settings. Dedicated Open CB (circuit breaker) and Close CB button is used to manually open and close CB.

There is a RS232 port available on the front panel and a RS485 port on the rear terminals. Using MODBUS RTU protocol, all stored information including alarm, trip and disturbance records can be read and settings can be modified with a PC loaded with setting software.

MK3000L has 4 configurable output relays. They can be activated by any of the protection functions available in the relay. There is also 1 output relay for internal fault indication. There are 2 configurable logic inputs for various functions.

## 1.1 Symbols and Definitions

In this manual and on the relay, unless the context otherwise requires, the following symbols and abbreviations shall apply throughout:-

AC	:	Alternating current		threshold
Ack	:	Acknowledge	I2>>	Negative sequence overcurrent second threshold
Alrm	:	Alarm	Invrse	Inverse
Aux	:	Auxiliary	Ip	Input
CT	:	Current transformer	IRF	Internal Relay Failure
CB	:	Circuit breaker	LED	Light emitting diodes
CBFP	:	Circuit Breaker Failure Protection	Lockd	Locked
Chg	:	Change	OC	Overcurrent
CLPU	:	Cold Load Pickup	OL	Overloaded
DC	:	Direct current	PU	Pickup
Dmd	:	Demand	RCRD	Record
Dmnd	:	Demand	Reclsr	Recloser
DMT	:	Definite time	Rmote	Remote
EF	:	Earth fault	Rst	Reset
E/Gnd	:	Earth/Ground	Strt	Start
Genrl	:	General	TCS	Trip circuit supervision
IDMT	:	Inverse definite minimum time	Thml	Thermal
IL1	:	Phase 1 current	tI>	Phase overcurrent first threshold trip
IL2	:	Phase 2 current	tI>>	Phase overcurrent second threshold trip
IL3	:	Phase 3 current	tI>>>	Phase overcurrent third threshold trip
I>	:	Phase overcurrent first threshold	tIo>	Earth fault first threshold trip
I>>	:	Phase overcurrent second threshold	tIo>>	Earth fault second threshold trip
I>>>	:	Phase overcurrent third threshold	tIo>>>	Earth fault third threshold trip
Io/IN	:	Earth (fault) current	tI2>	Negative sequence overcurrent first threshold trip
Io>	:	Earth fault first threshold	tI2>>	Negative sequence overcurrent second threshold trip
Io>>	:	Earth fault second threshold		
Io>>>	:	Earth fault third threshold		
I2>	:	Negative sequence overcurrent first		

## 1.2 Main Functions

The following table shows the functions available for MK3000L

ANSI codes	Features
50P/51P	Three-phase overcurrent
50N/51N	Earth fault overcurrent
49RMS	Thermal overload (True RMS)
46N	Negative sequence overcurrent
	Cold load pickup
	Instantaneous/start contact
86	Latching output contacts
	Setting groups
50BF	Circuit breaker failure detection
74TC	Trip circuit supervision
94/69	Circuit breaker monitoring and control
68	Blocking logic
	Inrush blocking
	Auxiliary timers
79	Multi-shot autoreclose
	Test of output relays (maintenance)
	CB control local/remote

General Features	
Number of digital inputs	2
Number of outputs relays	5
Events recording	250
Fault recording	50
Alarms	30
Disturbance recording	6*
Setting group	2
Auxiliary timers	2
Communication ports	Front RS232, Rear RS485
Communication	Modbus RTU
Time synchronization	Via communication port, via digital input
Measurements	Currents values & frequency, max and average currents values

\* Disturbance recording options: 6 x 3s, 4 x 4s, 3 x 5s, 2 x 7s, 1 x 9s

## 2.0 Front Panel

Using the front panel, the user can easily navigate through the user friendly menu, read measurements and change settings. The relay status and alarm or trip records are displayed on the back-lit LCD also.

**MK3000L Front panel**

### 2.1 LCD Display

The LCD has 2 lines with 16 characters each. Back light is on when a key is pressed and remain on for predefined time duration. The brightness can be adjusted to suit the lighting conditions.

### 2.2 Keypad

There are 8 keys on the front panel.

Up, Down, Enter and Esc are used to navigate through the menus and adjust the settings.

	Up	:	Scroll up the menus or increase setting value.
	Down	:	Scroll down the menus or decrease setting value.
	Esc	:	To exit from menus, submenus or to cancel setting value change. Press and hold for 1.5 seconds to return to default display from any submenu.
	Enter	:	To enter submenus or to confirm setting value change.
	Clear	:	To reset tripping, reset latched relay. If "CLEAR" Scroll is enabled (under Configurations-> Display menu) and during no alarm status, it can be used to scroll through Phase Overcurrent and Earth Fault settings, and to return to default display from any submenu if pressed and hold for 1.5 seconds.
	Record	:	To display Alarm records. To display successive records, press Record key again.

Open CB : To open circuit breaker from front panel.

Close CB : To close circuit breaker from front panel.

## 2.3 LEDs

- |                  |  |
|------------------|--|
| Aux LED          | : Indicates auxiliary power to the device  |
| Trip LED         | : Indicates tripping.  |
| Alarm LED        | : Blinks to indicate non acknowledge alarm (or tripping). Steady on when the alarm is acknowledged by pressing any key |
| Programmable LED | : 4 Programmable LED can be programmed to turn on when one or more linked function trigger.                            |

## 2.4 RS232 Port

The front panel RS232 port has the same MODBUS RTU protocol as the RS485 port on the rear terminal, though with fixed communication settings: 38400bps, 1 stop bit, even parity, address 1.

All stored information can be read and settings can be modified with a PC loaded with the supplied setting software.

## 2.5 Default Display

By default the LCD displays the current value measured for IL1, IL2, IL3 and Io. Input and output status as well as date and time can be shown by pressing Up key or Down key to change the default display page. Pressing Esc key always return to current value display.

As soon as an alarm or trip is detected, the display jumps to alarm record display to show the latest record.

## 2.6 Alarm Condition

During an alarm or tripping condition, Alarm LED blinks. Alarm record pops up. Any keypress change the Alarm LED to steady on.

tl> trip	1 / 2
L2	500A

Example of Alarm record title page, showing record 1 out of total 2 records. Press Enter to enter sub page for this record. Press Record/Down to show next alarm. Press Up to show previous alarm. Press Esc to return to Default Display. Press Clear to clear the alarm. If the condition still persists, the alarm cannot be cleared.

Date: 03/02/2015
Time: 08:23:44am

Alarm record sub page, showing record date and time. Press Esc/Enter/RECORD to return to Alarm Record title page.

Clear all alarm?
Clear=CLEAR

Clearing all record menu is shown when Up is pressed during display of Record 1's title page, or RECORD/Down is pressed during display of Last records title page. Press Clear to clear all Alarm record or Esc to cancel.

### 2.6.1 Alarm Auto Scrolling

10 seconds after alarm record pops up, the Alarm display will be auto scrolled to show sub page and

subsequently next records until all the records are shown and repeats. Each page is shown for 5 seconds. Example when there are 2 alarm records:

Record 1 Title Page → Record 1 Sub Page → Record 2 Title Page → Record 2 Sub Page → Record 1 Title Page → ....

Any key pressed stops auto scrolling. After 2 minutes of no activity, with which display still showing the alarm record, auto scrolling starts again.

## 3.0 Password

### 3.1 Password Protection

Relay settings can be viewed anytime but locked from being changed. A password is required for changing setting and CB Open, CB Close button pressed.

The password consists of four digit numbers. The factory default password is set as 0000.

The programming mode is indicated with the letter "P" on the right hand side of the display. The letter "P" remains present as long as the password is active. (2 minutes if there is no key action).

### 3.2 Password Entry

The input of the password is requested as soon as a modification of a parameter is made or Open/Close CB button is pressed. The user enters each one of the 4 digits by using up or down key and validates each digit with Enter. If Esc is pressed in between, the password entering is terminated.

"Password OK" is shown if correct password is entered. "Password ERROR" is shown if wrong password is entered.

The display returns to the point of the preceding menu. Pressed Enter again to modify the setting.

If no key is pressed after 2 minutes, the settings are locked. A new password request is associated with any subsequent setting change.

### 3.3 Changing Password

To change the password, go to Op Parameter -> Password menu. Enter current password to unlock, after that the display shows current password. Press Enter again to enter the new password.

## 4.0 Menus

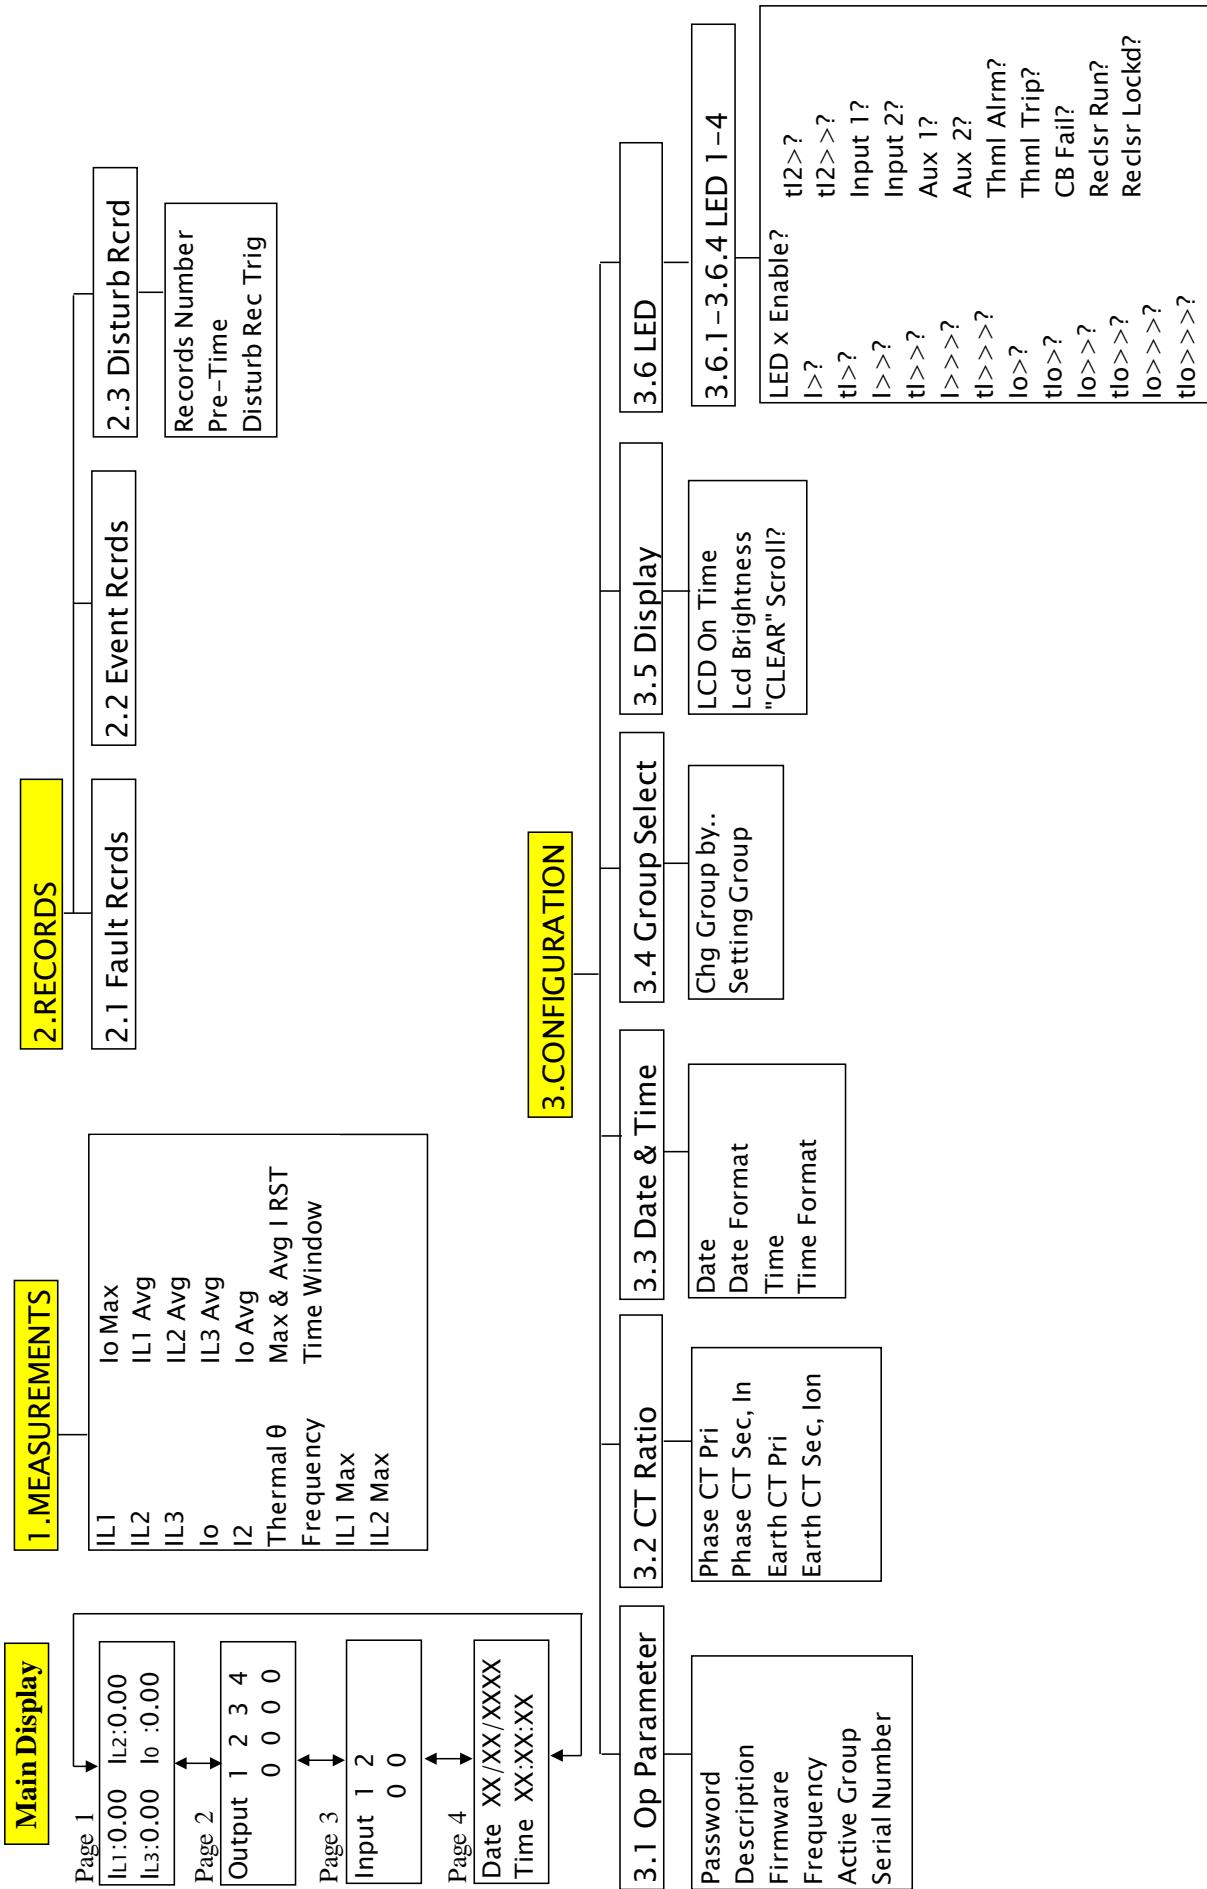

The menu is divided into 9 main menus and their corresponding submenus. To enter Main menu, press Enter during default display.

The menu can be navigated by pressing Up, Down, Enter and Esc keys. There is no need of a password when reading settings and measured values.

### 4.1 Menu Contents

The Main menu consists of 9 items. The menu structure is shown below:

## Main Display and Menu Contents

## 4. PROTECTION G1

### 4.1 Phase OC

```
|>?
|>

		Block l2>>?		

## MEASUREMENTS Menu

Various measurement values can be read under MEASUREMENTS menu. (The values are shown for illustrative purpose).

### 1.MEASUREMENTS

Heading of MEASUREMENTS menu. Press Enter to enter submenu content.

IL1

52.0A

Displays phase 1 current value. Taking into account of Phase CT Pri ratio.

IL2

88.2A

Displays phase 2 current value. Taking into account of Phase CT Pri ratio.

IL3

64.2A

Displays phase 3 current value. Taking into account of Phase CT Pri ratio.

Io

4.23A

Displays earth current value. Taking into account of E/Gnd CT Pri ratio.

I2

4.23A

Displays negative sequence value. Taking into account of Phase CT Pri ratio.

Thermal θ

RST=CLEAR

Displays thermal % state. Calculated on true RMS current values. Press Clear to clear the % values.

Frequency

50.01Hz

Displays current frequency calculated from phase 1 currents.

IL1 Max

120A

Displays peak phase 1 current value.

IL2 Max

234A

Displays peak phase 2 current value.

IL3 Max

1.23kA

Displays peak phase 3 current value.

Io Max

1.23kA

Displays peak earth current value.

**IL1 Avg**

323A

Displays average phase 1 current value.

**IL2 Avg**

80.4A

Displays average phase 2 current value.

**IL3 Avg**

78.2A

Displays average phase 3 current value.

**Io Avg**

6.24A

Displays average earth current value.

**Max & Avg I RST**  
RST=CLEAR

To clear the maximum and average values of the currents. Press Clear to clear these values.

**Time Window**

10min

Set the value for the time window (rolling) during which maximum and average values are stored. Press Enter to change the value.

## RECORDS Menu

**2.RECORDS**

Heading of RECORDS menu. Press Enter to enter submenu content.

### Fault Records Menu

**2.1 Fault Rcrds**

Heading of Fault Record submenu. Press Enter to enter submenu content.

**tl> trip**

[1]

**L3**

15.2A

Example of Fault Record title page, showing trip element, source, value and record number 1. Press Up or Down to show another record or Enter to enter sub page for this record. Press Clear to clear this record.

**Date: 03/01/2016**  
**Time: 10:19:52am**

Fault record sub page 1, showing record date and time. Press down to show next sub page. Press Esc/Enter to return to Fault Record title page.

**Active Set Group**

**1**

Fault record sub page 2, showing active protection setting group during fault. Press Up/down to change sub page. Press Esc/Enter to return to Fault Record title page.

**IL1 Magnitude**  
4.86A

Fault record sub page 3, showing L1 current during fault. Press Up/down to change sub page. Press Esc/Enter to return to Fault Record title page.

**IL2 Magnitude**  
4.52A

Fault record sub page 4, showing L2 current during fault. Press Up/down to change sub page. Press Esc/Enter to return to Fault Record title page.

**IL3 Magnitude**  
15.2A

Fault record sub page 5, showing L3 current during fault. Press Up/down to change sub page. Press Esc/Enter to return to Fault Record title page.

**Io Magnitude**  
1.2A

Fault record sub page 6, showing Lo current during fault. Press Up to previous sub page. Press Esc/Enter to return to Fault Record title page.

## Event Records Menu

**2.2 Event Rcrds**

Heading of Event Record submenu. Press Enter to enter submenu content.

**Genrl strt** [1]

Example of Event title page. Press Enter to enter sub page for this record.

**Date:** 03/02/2011

**Time:** 08:23:44am

Event record sub page, showing record date and time. Press Esc/Enter to return to Fault Record title page.

## Disturbance Records Menu

**2.3 Disturb Rcrd**

Heading of Disturbance Record submenu. Press Enter to enter submenu content.

**Records Number**

**6 Rec x 3 sec**

Set the disturbance record length and number. Press Enter to change between None (disable), 6 Rec x 3 sec, 4 Rec x 4 sec, 3 Rec x 5 sec, 2 Rec x 7 sec and 1 Rec x 9 sec.

**Note: Changing the record length and number will cause existing records being deleted. If necessary, read all wanted records before making changes.**

**Pre-Time**

**0.1s**

Set the disturbance record pre-time. Step 0.1s.

**Disturb Rec Trig**

**ON INST**

Criteria which will start the disturbance record function. Setting choices are ON INST (starts recording on start/instantaneous thresholds) or ON TRIP (starts recording on a tripping).

## CONFIGURATION Menu

### 3.CONFIGURATION

Heading of CONFIGURATION menu. Press Enter to enter submenu content.

## Op parameter Menu

### 3.1 Op Parameter

Heading of Op Parameter submenu. Press Enter to enter submenu content.

#### Password

\*\*\*\*\*

This password is required when changing relay settings. Press Enter to enter a new password. The user needs to enter existing password to unlock, after that the display shows current password. Press Enter again to enter the new password.

#### Description

MK3000L

Model name of this relay

#### Firmware

1.0

Version of the firmware.

#### Frequency

50Hz

Set the nominal value of the line frequency. Press Enter to change this value.

#### Active Group

50Hz

Currently active protection group.

## CT Ratio Menu

### 3.2 CT Ratio

Heading of CT Ratio menu. Press Enter to enter submenu content

#### Phase CT Pri

500A

Set the rated primary current of the Phase/Line CT.

#### Phase CT Sec, In

5A

Set the rated secondary current of the Phase CT according to the CT input terminal used. This setting affects disturbance record current scaling only.

#### Earth CT Pri

200A

Set the rated primary current of the Earth/Ground CT.

#### Earth CT Sec, Iin

1A

Set the rated secondary current of the Earth/Ground Phase CT according to the CT input terminal used. This setting affects

disturbance record current scaling only.

Note: The CT secondary should be connected to 5A or 1A CT input terminal according to the CT secondary current rating. The display current is calculated by the formula:

Current at CT input terminal / CT input terminal type x CT Pri (setting above)

For example:

Current at CT input terminal = 3A, CT input terminal type = 5A, CT Pri = 200A,	Current at CT input terminal = 3A, CT input terminal type = 1A, CT Pri = 100A,
The display value = $3/5 \times 200 = 120\text{A}$	The display value = $3/1 \times 100 = 300\text{A}$

## Date & Time Menu

### 3.3 Date & Time

Heading of Date & Time menu. Press Enter to enter submenu content.

#### Date

18/01/2016

Displays the date. Press Enter to change the date.

#### Date Format

DD/MM/YYYY

Set the date format for display. Press Enter to change between DD/MM/YYYY, MM/DD/YYYY.

#### Time

10:46:23am

Displays the time. Press Enter to change the time, starts from hour, minute and am/pm (if 12 hour format is selected). Second will be reset to 0 when enter is pressed for any of the digit.

#### Time Format

12-hour

Set the time format. Press enter to change between 12 and 24 hour.

## Group Select Menu

### 3.4 Group Select

Heading of Group Select menu. Press Enter to enter submenu content.

#### Chg Group by...

Menu

Set whether the protection group setting is change by Menu or Input. One of the input function must be set to 'Select Group' if Input is selected. Press Enter to change.

#### Setting Group

1

If above is set to Menu, this will set the active protection group. Press Enter to change.

## Display Menu

3.5 Display

Heading of Display menu. Press Enter to enter submenu content.

LCD On Time

10min

Set how long the LCD backlight remains on after no key is pressed.  
Press Enter to change.

LCD Brightness

Medium

Set the brightness of the LCD backlight. Press Enter to change.

“CLEAR” Scroll?

No

Set if Clear key can be used (during no alarm or trip state) to scroll through the default display pages, Phase OC and Earth OC settings (for currently selected group), as well as to return to Default Display from Record display. This is useful when Up, Down, Enter and Esc key is inaccessible due to the front panel is covered and locked.

## LED Menu

LED4 to LED 7 configuration is used to assign a protection function to a LED output. The LED lights up when the protection function is active. For tI>, tI>>, tI>>>, tIo>, tIo>>, tIo>>>, tI2> and tI2>> trip, the LED is latched by its respective alarm record, LED is off when its alarm record is cleared.

3.6 LED

Heading of LED Menu. Press Enter to enter submenu content

LED 4 to LED 7 menu has similar content. The LED 4 menu content is shown below:

3.6.1 LED 4

Heading of LED 4 Menu. Press Enter to enter submenu content.

LED 4 Enable?

Yes

Enable or disable LED 4 operation.

If yes is selected, the following menu is shown:

I>?

Yes

Assigned I> start to LED

tI>?

Yes

Assigned tI> trip to LED

I>>?

Yes

Assigned I>> start to LED

tI>>?

Yes

Assigned tI>> trip to LED

I>>>?

Yes

Assigned I>>> start to LED

tI>>>?

Yes

Assigned tI>>> trip to LED

Io>?

Yes

Assigned Io> start to LED

tIo>?

Yes

Assigned tIo> trip to LED

Io>>?	Yes	Assigned Io>> start to LED
tIo>>?	Yes	Assigned tIo>> trip to LED
Io>>>?	Yes	Assigned Io>>> start to LED
tIo>>>?	Yes	Assigned tIo>>> trip to LED
tl2>?	Yes	Assigned I2> start to LED
tl2>>?	Yes	Assigned tl2> trip to LED
Input 1?	Yes	Assigned Input 1 status to LED
Input 2?	Yes	Assigned Input 2 status to LED
Aux 1?	Yes	Assigned Aux1 Alarm/trip to LED
Aux 2?	Yes	Assigned Aux2 Alarm/trip to LED
Thml Alrm?	Yes	Assigned thermal alarm to LED
Thml Trip?	Yes	Assigned thermal trip to LED
CB Fail?	Yes	Assigned CB fail to LED
Reclsr Run?	Yes	Assigned recloser running to LED
Reclsr Lockd?	Yes	Assigned recloser locked to LED
TCS Alrm?	Yes	Assigned TCS alarm to LED

## PROTECTION G1 Menu

### 4.PROTECTION G1

Heading of PROTECTION G1 (Group 1) menu. Press Enter to enter submenu content.

## Phase OC Menu

### 4.1 Phase OC

Heading of Phase OC (Overcurrent) menu. Press Enter to enter submenu content.

I> menu

I>?	Yes
-----	-----

Set to Yes to enable phase overcurrent first threshold (I>). Then the following menu is displayed.

I>	2.00In
----	--------

Set the value for the current threshold I>.

NOTE : When delay type is IDMT, the maximum setting recommended should be 2.00In.

I> Delay Type	IDMT
---------------	------

Set the time delay type of I>. Setting choices are: IDMT (inverse definite time curve) and Definite Time.

If Definite Time is selected, the following menu is displayed:

tl>	Set the value for the time delay of I> definite time.
1.00s	

If IDMT is selected, the following menu is displayed:

I> IDMT Curve	Set the type of curve.
Normal Invrse	

ktl>	Set the time multiplier setting value for the curve.
0.20	

I>> menu

I>>?	Set to Yes to enable phase overcurrent second threshold (I>>). Then the following menu is displayed.
Yes	

I>>	Set the value for the current threshold I>>.
9.00In	

tl>>	Set the value for the time delay of I>> definite time.
100ms	

I>>> menu

I>>>?	Set to Yes to enable phase overcurrent third threshold (I>>>). Then the following menu is displayed.
Yes	

I>>> Sample	Set to yes to enable I>>> operated on current sample base. Otherwise it operates on fundamental value. Sample base method will ensure fast tripping on highly saturated current signal.
Yes	

I>>>	Set the value for the current threshold I>>>.
20.0In	

tl>>>	Set the value for the time delay of I>>> definite time.
30ms	

## Earth Fault Menu

4.2 Earth Fault	Heading of Earth Fault menu. Press Enter to enter submenu content.
-----------------	--

## Io> menu

Io>?	Yes
------	-----

Set to Yes to enable earth fault first threshold (Io>). Then the following menu is displayed.

Io>	0.10Ion
-----	---------

Set the value for the current threshold Io>. NOTE : When delay type is IDMT, the maximum setting recommended should be 0.5Ion..

Io> Delay Type	IDMT
----------------	------

Set the time delay type of Io>. Setting choices are: IDMT and Definite Time.

tlo>	1.00s
------	-------

Set the value for the time delay of Io> definite time.

Io> IDMT Curve	Normal Invrse
----------------	---------------

Set the type of curve.

ktlo>	0.20
-------	------

Set the time multiplier setting value for the curve.

## Io>> menu

Io>>?	Yes
-------	-----

Set to Yes to earth fault second threshold (Io>>). Then the following menu is displayed.

Io>>	1.00Ion
------	---------

Set the value for the current threshold Io>>.

tlo>>	100ms
-------	-------

Set the value for the time delay of Io>> definite time.

## Io>>> menu

Io>>>?	Yes
--------	-----

Set to Yes to enable earth fault third threshold (Io>>>). Then the following menu is displayed.

Io>>> Sample	Yes
--------------	-----

Set to yes to enable Io>>> operated on current sample base. Otherwise it operates on fundamental value. Sample base method will ensure fast tripping on highly saturated current signal.

**Io>>>**  
20.0Ion

Set the value for the current threshold Io>>>.

**tIo>>>**  
30ms

Set the value for the time delay of Io>>> definite time.

## Neg Seq OC

**4.3 Neg Seq OC**

Heading of Neg Seq OC (Negative Sequence Overcurrent) menu.  
Press Enter to enter submenu content.

I2> menu

**I2>?**  
Yes

Set to Yes to enable negative overcurrent first threshold (I2>). Then the following menu is displayed.

**I2>**  
0.10In

Set the value for the current threshold I2>. NOTE : When delay type is IDMT, the maximum setting recommended should be 0.5Ion..

**I2> Delay Type**  
IDMT

Set the time delay type of I2>. Setting choices are: IDMT and Definite Time.

If Definite Time is selected, the following menu is displayed:

**tI2>**  
1.00s

Set the value for the time delay of I2> definite time.

**I2> IDMT Curve**  
Normal Invrse

Set the type of curve.

**kI2>**  
0.20

Set the time multiplier setting value for the curve.

I2>> menu

**I2>>?**  
Yes

Set to Yes to earth fault second threshold (I2>>). Then the following menu is displayed.

**I2>>**  
1.00In

Set the value for the current threshold I2>>.

**tl2>>**  
100ms

Set the value for the time delay of I2>> definite time.

## Thermal OL Menu

**4.4 Thermal OL**

Heading of Thermal OL (Overload) menu. Press Enter to enter submenu content.

**Thermal OL?**

**Yes**

Set to Yes to enable thermal overload protection. Then the following menu is displayed.

**Iθ>**

**1.50In**

Set the value for the thermal overload Iθ>.

**Tθ>**

**10min**

Set the value for the thermal time constant.

**k>**

**1.10**

Set the value for the k factor.

**θ Trip**

**100%**

Set the percentage of the thermal overload trip.

**θ Alarm**

**100%**

Set the percentage of the thermal overload alarm.

(To disable this alarm, set this value to equal or higher than θ Trip %)

## Autoreclose Menu

Refer to 5.5 Autoreclose for more detail explanation.

**4.5 Autoreclose**

Heading of autoreclose menu. Press Enter to enter submenu content.

**Autoreclose?**

**Yes**

Set to Yes to enable autoreclose function. Then the following menu is displayed.

**Dead Time**

**tD1**

**2.00s**

Set the dead time for reclose cycle 1. The dead time starts when the CB has opened (52A input deactivates) and the involved protection threshold reset

**Dead Time**

**tD2**

**3.00s**

Set the dead time for reclose cycle 2.

<b>Dead Time</b>	Set the dead time for reclose cycle 3.			
tD3	6.00s			
<b>Dead Time</b>	Set the dead time for reclose cycle 4.			
tD4	10.00s			
<b>Reclaim Time</b>	Set the reclaim time. . The reclaim time starts when the CB has closed (52A input activates). If no tripping after reclaim time elapsed, the autoreclose resets.			
tR	8.00s			
<b>Inhibit Time</b>	Set the inhibit time. This timer is used to block the autoreclose being initiated after lockout and CB is manually closed onto a fault.			
tl	20.0s			
<b>Phase Cycles</b>	Set the number of shots for phase cycle. Applies to tI>, tI>>, tI>>>, tAux 1 and tAux 2			
3				
<b>Earth Cycles</b>	Set the number of shots for earth fault. Applies to tIo>, tIo>> and tIo>>>			
2				
<b>CYCLES</b>	1	2	3	4
tl>	0	1	1	1
tl>>	1	1	1	1
tl>>>	1	1	2	1
tlo>	1	1	1	1
tlo>>	0	1	1	1
tlo>>>	1	1	1	2
tAux 1	0	0	1	1
tAux 2	0	0	1	1

## PROTECTION G2 Menu

**5.PROTECTION G2** (Group 2) menu has similar content as PROTECTION G1 (Group 1) menu. The Protection G2 settings are applied when Protection Group 2 is activated.

## INPUT Menu

<b>6.INPUT</b>	Heading of INPUT menu. Press Enter to enter submenu content.
----------------	--

## 6.1 Input 1

Heading of Input 1 menu. Press Enter to enter submenu content.

### Input 1 Func

#### Aux 1

Set the function of Input 1. Setting choices are: None, Aux 1, Aux 2, Reset, Blocking, TCS, Select Group, Cold Load PU (pickup) and Sync Clock, CB Status 52A, Blk Autoreclose, Control Close, Start Dist Rcrd, Local

**Aux 1 or Aux 2:** The input is used as auxiliary alarm or tripping signal.

If tAux is not assigned to trip output relay (whether it is assigned to a start output relay or not), activation of the input will generate an Aux Alarm signal after time delay.

If tAux is assigned to trip output relay, the input will generate an Aux Trip signal after time delay.

**Reset, Blocking, TCS:** See below

**Select Group:** Input deactivates to select Protection Group 1, activates to select Protection Group 2.

To enable changing group by input, 3.4 Group Select->Chg Group by.. must be set to Input.

**Cold Load PU:** Activation of the input starts CLPU timer and increases protection threshold defined by 3.7 Cold Load PU setting.

**Sync Clock:** Activation of the input will set the clock to the nearest minute.

**CB Status 52A:** Position of Circuit breaker. Activate: CB close, deactivate: CB open. Required for CB monitoring and autoreclose.

**Blk Autoreclose:** Blocking of the autoreclose function

**Control Close:** Activation of the input to assert a manual CB close. One of the output relay function must be CB close for this to function.

**Start Dist Rcrd:** Start disturbance recording.

**Local Mode:** Disable setting changed by communication and remote command to Relay

An input is activated by level or edge depending on its function:

<b>On level:</b>	Aux 1, Aux 2, Blocking, TCS, Select Group, CB Status 52A, Blk Autoreclose, Local Mode
<b>On Edge:</b>	Reset, Cold Load PU, Sync Clock, Control Close, Start Dist Rcrd

### Input 1 Type

#### Active High

Set how the input 1 is activated. For Active High, energizing the input activates the input. For Active Low, de-energizing the input activates the input.

If Aux 1 or Aux 2 is selected, the following menu is displayed:

Aux timer	500ms
-----------	-------

Set the value for the time delay of Aux 1 or 2 definite time.

If Reset is selected, the following menu is displayed:

Rst Trip/Alarm	Yes	Set to yes to enable the input to reset trip and alarm.
Rst Thermal θ%	Yes	Set to yes to enable the input to reset thermal %.

If Blocking is selected, the following menu is displayed:

Block I>?	Yes	Set to yes to enable blocking of I>
Block I>>?	Yes	Set to yes to enable blocking of I>>
Block I>>>?	Yes	Set to yes to enable blocking of I>>>
Block Io>?	Yes	Set to yes to enable blocking of Io>
Block Io>>?	Yes	Set to yes to enable blocking of Io>>
Block Io>>>?	Yes	Set to yes to enable blocking of Io>>>
Block Thml OL?	Yes	Set to yes to enable blocking of Thermal Overload
Block I2>?	Yes	Set to yes to enable blocking of I2>
Block I2>>?	Yes	Set to yes to enable blocking of I2>>

If TCS (trip circuit supervision) is selected, the following menu is displayed:

Aux timer	500ms	Set the value for the time delay of TCS. TCS alarm triggers when the input is deactivated for longer than the time delay. TCS function is enabled when the trip output relay R1 is not energized.
-----------	-------	---

**Input 2 Menu** has similar content as Input 1 menu. The settings are applied to input 2.

## OUTPUT Menu

7.OUTPUT      Heading of OUTPUT menu. Press Enter to enter submenu content.

### Output Relay 1

7.1 Relay 1      Heading of output relay 1 menu. Press Enter to enter submenu content.

Relay 1 Func	Trip	Set the function of output Relay 1. Note that Relay 1 function is locked to Trip.
Reset	Auto	Set the reset method of relay: Auto (Unlatched), Manual (Latched).
tl>?	Yes	Assign I> trip to the output relay.
tl>>?	Yes	Assign I>> trip to the output relay.

<b>tl&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign I>>> trip to the output relay.
<b>tlo&gt;?</b>	<b>Yes</b>	Assign Io> trip to the output relay.
<b>tlo&gt;&gt;?</b>	<b>Yes</b>	Assign Io>> trip to the output relay.
<b>tlo&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign Io>>> trip to the output relay.
<b>Thml OL?</b>	<b>Yes</b>	Assign Thermal Overload to the output relay.
<b>tAux 1?</b>	<b>Yes</b>	Assign Aux 1 input trip to the output relay.
<b>tAux 2?</b>	<b>Yes</b>	Assign Aux 2 input trip to the output relay.
<b>Remote</b>	<b>Yes</b>	Assign Remote trip (by communication and Open CB control) to the output relay
<b>tl2&gt;?</b>	<b>Yes</b>	Assign I2> trip to the output relay.
<b>tl2&gt;&gt;?</b>	<b>Yes</b>	Assign I2>> trip to the output relay.

## Output Relay 2 to 4

Output Relay 2 to 4 menu has similar content. The output Relay 2 menu content is shown below::

<b>7.2 Relay 2</b>	Heading of output Relay 2 menu. Press Enter to enter submenu content.
--------------------	---

<b>Relay 2 Func</b>	<b>Trip</b>	Set the function of output Relay 2. Possible settings are: Trip, Start/Other and CBFP .
<b>Reset</b>	<b>Auto</b>	Set the reset method of relay: Auto (Unlatched), Manual (Latched).

If relay function is set to Trip, the menu content similar to Relay 1 is shown, please refer to Output Relay 1.

**If relay function is set to Start/Other**, the following menu is displayed:

<b>I&gt;?</b>	<b>Yes</b>	Assign I> start to the output relay.
<b>I&gt;&gt;?</b>	<b>Yes</b>	Assign I>> start to the output relay.
<b>I&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign I>>> start to the output relay.
<b>Io&gt;?</b>	<b>Yes</b>	Assign Io> start to the output relay.
<b>Io&gt;&gt;?</b>	<b>Yes</b>	Assign Io>> start to the output relay.
<b>Io&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign Io>>> start to the output relay.
<b>Thml OL(Alarm)?</b>	<b>Yes</b>	Assign Thermal Overload Alarm to the output relay.

tAux 1(Alarm)?	Yes	Assign Aux 1 input alarm to the output relay.
tAux 2(Alarm)?	Yes	Assign Aux 2 input alarm to the output relay.
TCS(Alarm)?	Yes	Assign TCS alarm to the output relay.
Demand(Alarm)?	Yes	Assign Demand alarm to the output relay.
I2>?	Yes	Assign I2> alarm to the output relay.
I2>>?	Yes	Assign I2>> alarm to the output relay.
CB Close?	Yes	Assign CB Close signal to the output relay.
CB Fail?	Yes	Assign CB Fail alarm to the output relay.
Reclsr Run?	Yes	Assign Recloser run alarm to the output relay.
Reclsr Locked?	Yes	Assign Recloser locked alarm to the output relay.
CB Alarm?	Yes	Assign CB Alarm to the output relay.

If relay function is set to CBFP (Circuit Breaker Failure Protection) the following menu is displayed:

Delay	Set the value for the time delay of CBFP. This output relay is activated, if after the activation of the trip relay, the fault has not been cleared for longer than this delay.
Include Aux?	Set if Aux 1 or 2 input is included as fault condition. Prolonged activation or latched Aux input could cause the undesirable activation of CBFP relay.

## Maintenance Mode Menu

7.5 Maint mode (Prot disabled)	Heading of Maintenance Mode menu. Press Enter to enter submenu content.
Output 1 2 3 4 Test 0 0 0 0	Press Enter once, output 1 blinks, press Up/Down to toggle the output status. Press Enter again to test output 2, and subsequently for output 3 and 4. Press Esc to exit.

## COMMUNICATION Menu

Communication setting is applicable to the RS485 port on the rear terminals of the relay (the front panel RS232 port has fixed communication settings: 38400bps, 1 stop bit, even parity, address 1).

8.COMMUNICATION	Heading of COMMUNICATION menu. Press Enter to enter submenu content.
-----------------	--

<b>Communication?</b>	Set to yes to enable MODBUS RTU communication.
Yes	
<b>Remote Set?</b>	Set to yes to enable setting change through communication. When set to no, only Reset alarm/trip, Reset maximum and average measurement value, Reset display, and change of date and time is allowed.
Yes	
<b>Baud Rate</b>	Set the baud rate in bit per second (bps).
38400bps	
<b>Parity</b>	Set the parity in the data frame.
Even	
<b>Stop Bit</b>	Set the number of stop bit in the data frame.
1	
<b>Relay Address</b>	Set the address of the relay in the MODBUS network.
1	

## MISC CONTROL Menu

<b>9.MISC CONTROL</b>	Heading of Miscellaneous Control) menu. Press Enter to enter submenu content.
-----------------------	---

### CB Monitor

Through CB Monitor and CB Alarm menu, it is possible to read and clear counter values (CB Monitoring) and assigned alarm (CB Alarm) related to circuit breaker. Most of the CB Monitor functions are only available when one of the input functions is CB status 52A.

<b>9.1 CB Monitor</b>	Heading of CB Monitoring menu. Press Enter to enter submenu content.
<b>CB Opening Time</b>	Displays circuit breaker opening time. Measured between the activation of trip output relay and the deactivation of 52A input.
90ms	
<b>CB Closing Time</b>	Displays circuit breaker closing time. Measured between the activation of CB close output relay and the activation of 52A input.
110ms	
<b>CB Operations</b>	Displays the number of operations of the circuit breaker
76	

**ΣAmps(n) IL1**  
345 kA

Displays the summation of the current (in Amps or square Amps, set by 'n' in CB Alarm menu) for phase 1 interrupted by the circuit breaker.

**ΣAmps(n) IL2**  
12 kA

Same as above for phase 2

**ΣAmps(n) IL3**  
1.2 MA

Same as above for phase 3

**Reset All value**  
**RST=CLEAR**

Reset all the counter value in CB Monitor menu,

## CB Alarm

**9.2 CB Alarm**

Heading of CB Alarm menu. Press Enter to enter submenu content.

**CB Opening Time?**  
Yes

Set to Yes to enable circuit breaker opening alarm. The following menu is displayed.

**CB Opening Time**  
150ms

Set the value for the circuit breaker opening time threshold.

**CB Closing Time?**  
Yes

Set to Yes to enable circuit breaker closing alarm. The following menu is displayed.

**CB Closing Time**  
250ms

Set the value for the circuit breaker closing time threshold.

**CB Operations?**  
Yes

Set to Yes to enable circuit breaker operations alarm. The following menu is displayed.

**CB Operations**  
200

Set the value for the circuit breaker operations threshold.

**ΣAmps(n)?**  
Yes

Set to Yes to enable the summation of the current (in Amps or square Amps) alarm.

$\Sigma$ Amps (n)	Set the summation of the current (in Amps or square Amps) threshold.
100MA	

n	Set the exponent for the summation for $\Sigma$ Amps. 1 (IA) or 2 ( $I^2A^2$ )
1	

## Inr Blocking

9.3 Inr Blocking	Heading of Inrush Blocking menu. Press Enter to enter submenu content
------------------	---

Inr Blocking?	Set to Yes to enable the crossing of the 2 <sup>nd</sup> Harmonic ratio threshold on any phase activates the Inrush Blocking Logic function instantaneously.
Yes	

Inr H2 Ratio	Set the value for the 2nd harmonic threshold ratio.
20%	

Inr tReset	Set the value for the Inrush tReset time. This provides a reset delay of the Inrush Blocking once the 2nd harmonic level falls below the set threshold
100ms	

The following protection functions can be assigned for inrush blocking.

Inr Blocking I>?	Yes	Enable or disable inrush blocking for I>
Inr Blocking I>>?	Yes	Enable or disable inrush blocking for I>>
Inr Blocking I>>>?	Yes	Enable or disable inrush blocking for I>>>
Inr Blocking Io>?	Yes	Enable or disable inrush blocking for Io>
Inr Blocking Io>>?	Yes	Enable or disable inrush blocking for Io>>
Inr Blocking Io>>>?	Yes	Enable or disable inrush blocking for Io>>>
Inr Blocking I2>?	Yes	Enable or disable inrush blocking for I2>
Inr Blocking I2>>?	Yes	Enable or disable inrush blocking for I2>>

## Cold Load Pickup Menu

Cold Load Pickup allows selected settings to be altered to respond to temporary overload conditions that may occur during cold starts. These conditions could be switching on large heating load after a extended cooling period, air conditioning, or inductive loads that draw high starting current like motor.

**To enable cold load pickup, one of the input functions has to be set to Cold Load PU.**

9.4 Cold Load PU	Heading of Cold Load Pickup menu. Press Enter to enter submenu content.
------------------	---

<b>CLPU Level</b>	Scaling value, in percent, for the cold load pick up assigned to the selected thresholds.
200%	

<b>CLPU tCL</b>	Delay timer setting (tCL) for the Cold Load Pickup function.
5.00s	

The following protection functions can be assigned to cold load PU.

<b>CLPU I&gt;?</b>	<b>Yes</b>	Assign I> with the cold load pick up function.
<b>CLPU I&gt;&gt;?</b>	<b>Yes</b>	Assign I>> with the cold load pick up function.
<b>CLPU I&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign I>>> with the cold load pick up function.
<b>CLPU Io&gt;?</b>	<b>Yes</b>	Assign Io> with the cold load pick up function.
<b>CLPU Io&gt;&gt;?</b>	<b>Yes</b>	Assign Io>> with the cold load pick up function.
<b>CLPU Io&gt;&gt;&gt;?</b>	<b>Yes</b>	Assign Io>>> with the cold load pick up function.
<b>CLPU Thml OL?</b>	<b>Yes</b>	Assign Thermal Overload (Iθ>) with the cold load pick up function.
<b>CLPU I2&gt;?</b>	<b>Yes</b>	Assign I2> with the cold load pick up function.
<b>CLPU I2&gt;&gt;?</b>	<b>Yes</b>	Assign I2>> with the cold load pick up function.

## Demand Alarm Menu

Demand alarm is used to give alarm signal when load current is higher than the threshold. The threshold is set lower than overcurrent for proper functioning.

<b>9.5 Demand Alarm</b>	Heading of Demand Alarm menu. Press Enter to enter submenu content.
-------------------------	---

<b>Demand Alarm?</b>	Set to Yes to enable demand alarm. Then the following menu is displayed.
----------------------	--

<b>Idemand&gt;</b>	Set the value for the current threshold Idemand>.
1.50In	

<b>tIdemand&gt;</b>	Set the value for the time delay of Idemand>.
9.00s	

## 5.0 Functions and Descriptions

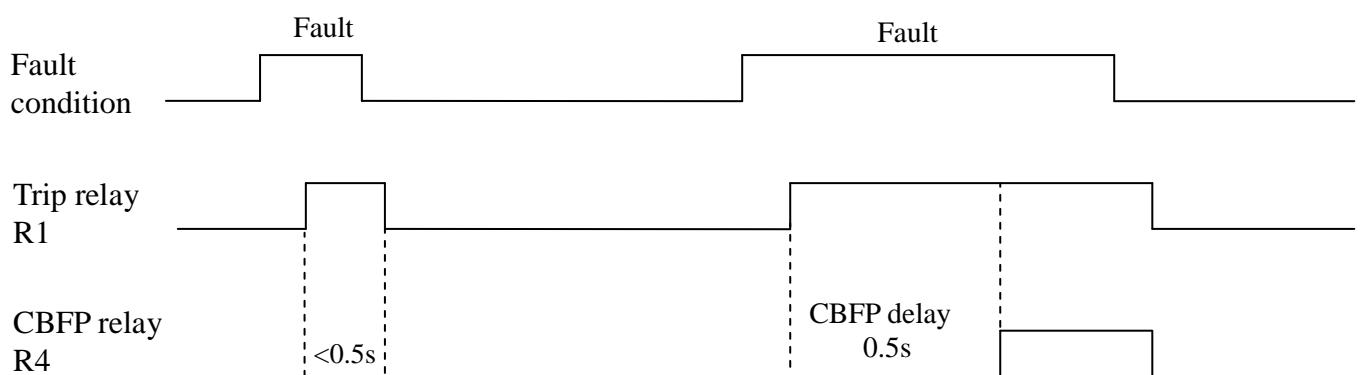

### 5.1 Circuit Breaker Failure Protection

Circuit breaker failure protection (CBFP) is used to generate a tripping signal via selected output relay after a preset time delay if the fault has not been cleared after the activation of tripping signal through trip contact relay R1. Thermal overload is excluded from fault condition for CBFP.

CBFP output is usually used to trip the upstream circuit breaker or to trip a redundant tripping circuit of the same circuit breaker.

CBFP function can be assigned to relay R2 to R4.

There is an option to enable or disable Aux 1 or 2 as a fault condition (if Aux 1 or 2 is assigned to a digital input as a tripping source). Prolonged activation or latched Aux input could cause the undesirable activation of CBFP relay, in this case set ‘Include Aux’ to ‘No’ to disable the condition.

Timing diagram for CBFP. (R4 function set to CBFP, delay 0.5s.)

### 5.2 Inrush Blocking

The inrush blocking function can be used to block the overcurrent (selectable:  $I >$ ,  $I >>$ ,  $I >>>$ ), earth fault ( $I_o >$ ,  $I_o >>$ ,  $I_o >>>$ ) and negative sequence overcurrent ( $I_2 >$ ,  $I_2 >>$ ) starting due to inrush current with second harmonic component. During transformer energization, the second harmonic component of the inrush current is high. The relay activates inrush blocking for any phase with second harmonic current ratio above the  $Inr H2 Ratio$ . In general, a setting of 15 to 20% can be applied. A too high setting may result in the overcurrent tripping during transformer energization. A too low setting may prevent tripping during some internal transformer faults with significant second harmonic current. 0.2 $I_n$  minimum fundamental current is required for operation of inrush blocking function.

The reset delay ( $t_{Reset}$ ) of the Inrush Blocking once the 2nd harmonic level falls below the set threshold can be set depends on the transient inrush duration. Typically from 0.1seconds (for 100kVA transformer) to 1.0 second (for a large transformer)

## 5.3 Thermal Overload Protection

Thermal overload protection can be used to prevent damages to the equipment of the electrical plant. A prolonged overloading causes excessive heating, which may result in deterioration of the insulation, or in extreme cases, insulation failure.

Load current is used to calculate the heating and cooling effect of the equipment to be protected. The highest phase current is automatically used as input information for the thermal model. The thermal overload protection can be set with both alarm and trip stages,  $\theta$  Trip % and  $\theta$  Alarm %, with 5% below the set % for resetting.

The heating within any plant equipment, such as cables or transformers, is of resistive type ( $I^2R \times t$ ). Thus the thermal time characteristic used in the relay is based on current squared, integrated over time.

Protection equipment is designed to operate continuously at a temperature corresponding to its full load rating, where heat generated is balanced with heat dissipated. Over-temperature conditions occur when currents in excess of rating flow for a certain period of time. It can be shown that temperatures during heating follow exponential time constants and a similar exponential decrease of temperature occurs during cooling.

In order to apply this protection element, the thermal time constant ( $T_\theta$ ) of the plant equipment to be protected is therefore required.

The calculation of the Time to trip is given by:

$$T_{trip} = T_\theta \ln \left( \frac{K^2 - \theta}{K^2 - \theta_{trip}} \right)$$

Valid when:  
 $K^2 > \theta$   
 $K^2 > \theta_{trip}$

$T_{trip}$  = Time to trip (in seconds)

$T_\theta$  = Thermal time constant of the protected element (in seconds)

$K = \frac{I_{eq}}{k \cdot I_{\theta>}}$

$I_{eq}$  = Equivalent current corresponding to the RMS value of the largest phase current.

$I_{\theta>}$  = Full load current rating given by the national standard or by the supplier.

$k$  = Factor associated to the thermal state formula.

$\theta$  = Initial thermal state. If the initial thermal state = 30% then  $\theta = 0.3$

$\theta_{trip}$  = Trip thermal state. If the trip thermal state is set at 100%, then  $\theta_{trip} = 1$

The settings of these parameters are available in the menus:

PROTECTION G1/G2 – Thermal OL

The calculation of the thermal state is given by the following formula:

$$\theta_{t+1} = K^2 \left( 1 - e^{-\frac{t}{T_\theta}} \right) + \theta_t e^{-\frac{t}{T_\theta}}$$

$\theta$  being calculated every 20ms.

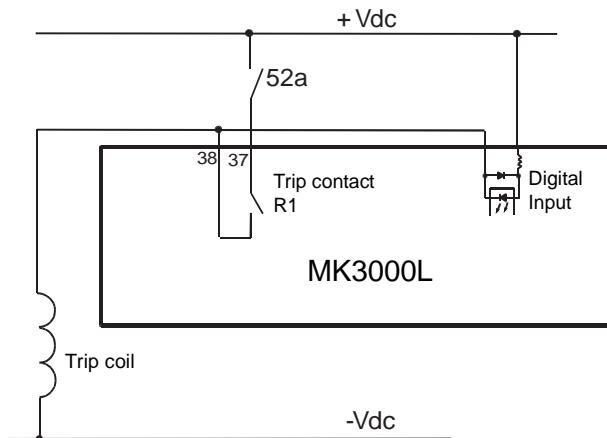

## 5.4 Trip Circuit Supervision

Trip Circuit Supervision (TCS) enables the trip circuit to be monitor. To enable TCS function, set one of the Digital Input function to TCS (at the INPUT Menu), Input Type as Active High and set the appropriate TCS delay time.

The continuity of trip circuit is monitor when Trip contact R1 is not energized. When the input detects no signal for a time longer than the TCS delay time, TCS alarm pops up to warn the failure of trip circuit. Three examples of application are given below.

### Example 1: Trip Coil Monitoring

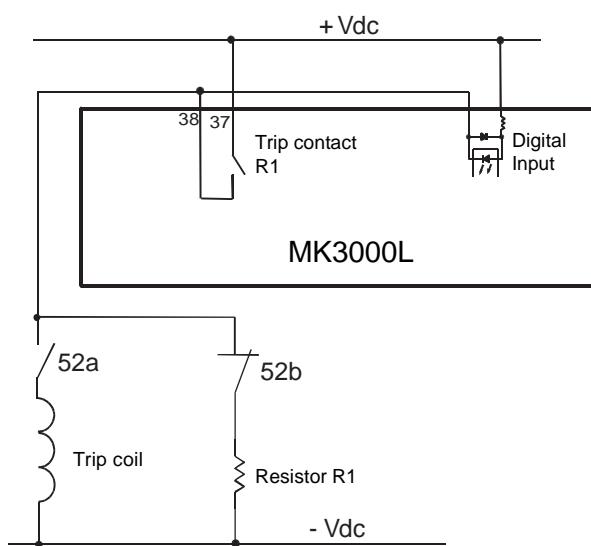

In this example only 52a auxiliary contact is available; the trip coil is monitored when the CB is open or closed.

### Example 2: Trip Coil and Auxiliary Contacts Monitoring

In this example both 52a and 52b auxiliary contacts are available. The complete trip circuit is monitored when the CB is closed and a part of the trip circuit when the CB is open (excluding Trip coil).

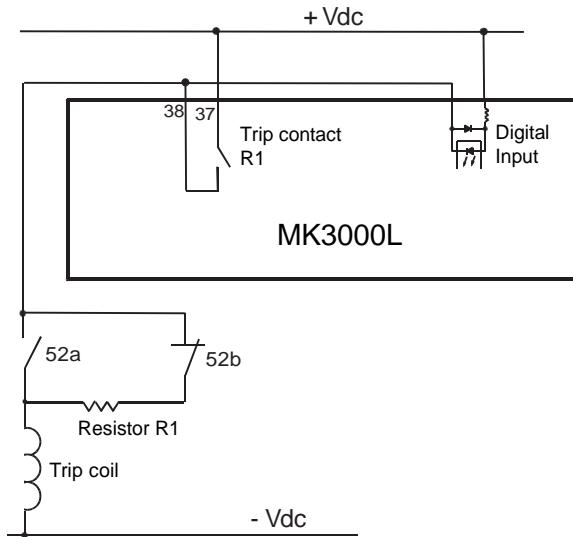

It is necessary to insert resistor R1 in series with 52b, if the Trip contact R1 is latched or it stays involuntarily closed.

### Examples 3: Trip Coil and Auxiliary Contacts Monitoring when CB is open or closed

In this example both 52a and 52b auxiliary contacts are available; the complete trip circuit is monitored when the CB is open or closed.

In this case it is necessary to insert resistor R1, if the Trip contact R1 is latched or it stays involuntarily closed.

### Recommended Resistor R1 Value

The recommended maximum resistor R1 value for various auxiliary voltage is shown:

Auxiliary Voltage, Ua	24Vdc	36Vdc	48Vdc	60Vdc	72Vdc	110Vdc	132Vdc
Maximum R1 value (Ohm)	4.7k	9.1k	13k	16k	22k	43k	62k
Power rating (W)	1/4	1/4	1/2	1/2	1/2	1	1

Auxiliary Voltage, Ua	220Vdc	264Vdc
Maximum R1 value (Ohm)	82k	91k
Power rating (W)	2	2

For the case of example 3, the maximum R1 value should be deducted by Trip coil resistance (insignificant in most cases).

The Power rating of the resistor R1 is calculated as:

$$P_{R1} > 2 \times \frac{U_a^2}{R1} \text{ Watt}$$

## 5.5 Disturbance Recorder

The disturbance recorder can be initiated by starting, tripping, input or remote (disturbance). The total disturbance recording time is 6 records of 3 seconds, or  $4 \times 4\text{s}$ , or  $3 \times 5\text{s}$ , or  $2 \times 7\text{s}$  or  $1 \times 9\text{s}$ . When the available memory space is used up, the new record automatically overwrites the oldest record.

The pre-time is the length of time before the disturbance. For example if the pre-time time is set to 100ms, the record starts 100 ms before the disturbance.

**Note: Changing the record length and number will result in deletion of existing records. If necessary, read all wanted records before making changes.**

The recorder stores actual samples that are taken at a rate of 32 samples per cycle. Each disturbance record consists of 5 analogue and 7 digital channels.

## 5.6 Autoreclose

Autoreclose is used for clearing transient/non-permanent fault. Autoreclose can minimize power blackout time and reduces the time and costs required for site servicing. With autoreclose, instantaneous protection can be used, which shorten the time to clear a fault and minimize damages and to reduce the number of permanent faults.

For recloser to function, the following setting is required:

1. One of the digital input function is CB Status 52A.
2. One of the output relay function is start/other, CB Close is assigned and reset method is auto (unlatched)
3. Output Relay 1 (trip) reset method is auto (unlatched).
4. Reclose cycle assigned to phase or earth cycle ( $>0$ ).

The phase cycle and earth cycle are used to set the number of shots (reclose attempts), recloser can perform 2, 3 or 4 shot cycle. Dead times can be independently adjusted for each shots. The phase cycle is applied for tAux1 and tAux2 tripping also.

**CYCLE setting (for tI>, tI>>, tI>>>, tIo>, tIo>>, tIo>>>, tAux 1, tAux2):**

0: Recloser will move to lock status after tripping.

1: Tripping, followed by reclosing cycle.

2: No trip of pickup.

The dead time starts when the CB has opened (52A input deactivates) and the involved protection threshold reset. At the end of the relevant dead time, a CB close signal is sent. The reclaim time starts when the CB has closed (52A input activates). If no tripping after reclaim time elapsed, the recloser resets (reclose successful).

If tripping operates during reclaim time, the relay either advances to the next shot, or if all the reclose attempts have been accomplished, the recloser locks out (recloser final trip). The recloser will not be initiated for any fault during lockout.

### CB Fail Alarm

If CB not open or close as expected for 2 seconds during reclose cycle, recloser locks out and CB Fail alarm generated.

### **Lockout Reset**

After lockout the CB can be closed by control close input, CB close button or remote CB close command or by manual CB Close. The inhibit timer starts counting after CB close (52A input activates). When the timer elapsed, lockout condition reset.

### **Block Autoreclose Input**

If this input activate during reclose cycle , recloser locks out.

If activate when recloser not running, next tripping is definitive trip.

### **Other Notes**

- During reclose cycle, Close CB button, control close by input and remote CB close command is disabled. Open CB button and remote tripping command will lock the recloser.
- Maintenance mode will stop the reclose cycle without any locking. Power down the relay also stops the reclose cycle.
- If the relay receives an order to change setting group, the order will only be executed after the reclose cycle has elapsed.

## **5.7 Open CB & Close CB Control**

Open CB : To manually open circuit breaker

Close CB : To manually close circuit breaker

The Open CB and Close CB button allows circuit breaker (CB) to be opened and closed from the relay front panel. Password is required for this operation. The control is available in the default display. The control will work with or without CB Status 52A input. Open CB control is using Output Relay 1 (Trip) for the signal.

For Open CB control, ‘Remote’ is assigned to output relay R1 or any other output relay with trip function. Otherwise the display shows “Remote Trip output not found”

For Close CB control, one of the output relay function should be start/other and ‘CB Close’ is assigned. Otherwise “CB close output not found” warning will be shown.

### **To Open CB**

To open CB, press Open CB button once, password is required if not yet entered, then the display shows “Press again to open CB...”, press Open CB button again to open the CB. Output relay 1 energize until CB Status 52A input deactivates. If CB Status 52A input is unavailable, Output relay 1 will energize for 2 seconds. The display shows “CB Opened” when CB opens successfully.

If Open CB button press but CB already opened (CB Status 52A input deactivates), the display shows “CB is open” and ends.

### **To Close CB**

To close CB, press Close CB button once, password is required if not yet entered. The display shows “Press again to close CB...”, press Close CB button again to close the CB. Output relay for CB Close energize until CB Status 52A input activates. If CB Status 52A input is unavailable, Output relay will energize for 2 seconds. The display shows “CB Closed” when CB closes successfully.

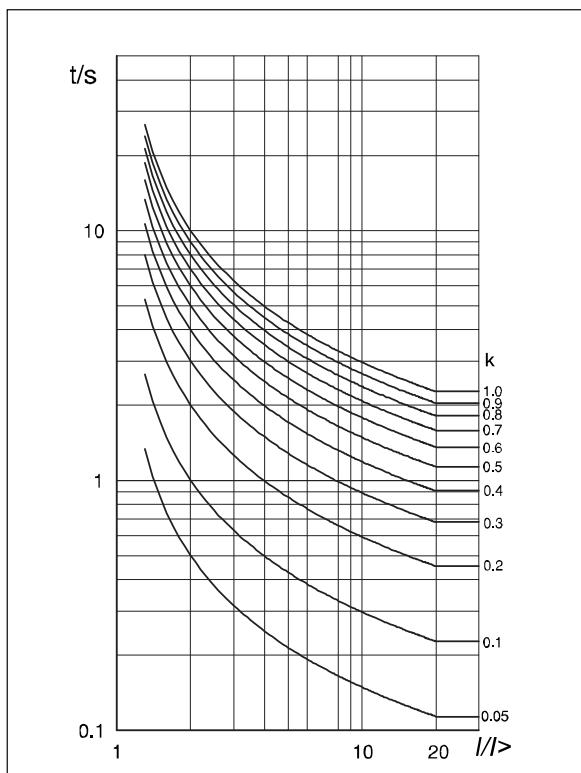

If Close CB button press but CB already closed (CB Status 52A input energizes), the display shows “CB is close” and ends.

### **CB Fail Alarm**

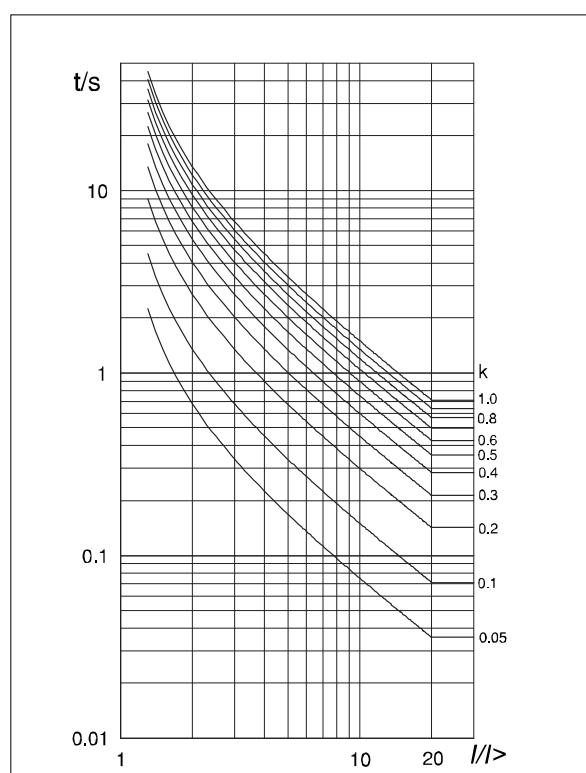

If CB Status 52A input is available and CB does not open or close after 2 seconds, CB Fail alarm generated.

<b>Connection terminal</b>	<b>Function Description</b>
1	5A / 1A common CT input for IL1
2	5A CT input for IL1
3	1A CT input for IL1
4	5A / 1A common CT input for IL2
5	5A CT input for IL2
6	1A CT input for IL2
7	5A / 1A common CT input for IL3
8	5A CT input for IL3
9	1A CT input for IL3
10	5A / 1A common CT input for Io
11	5A CT input for Io
12	1A CT input for Io
13-17	Not used
18	Termination resistor for RS485 (shorting to 20 for termination)
19	RS485 positive terminal
20	RS485 negative terminal
21	RS485 cable shield
22	Not used
23-24	Output contact R3
25-26	Output contact R4
27-28	Digital Input 1 (no polarity)
29-30	Digital Input 2 (no polarity)
31	Casing earth terminal
32	Auxiliary supply input (no polarity)
33	Auxiliary supply input (no polarity)
34	Common contact for IRF
35	Normally open contact for IRF
36	Normally closed contact for IRF
37	Common contact for tripping contact R1
38	Normally open contact for tripping contact R1
39	Normally closed contact for tripping contact R1
40	Common contact for output contact R2
41	Normally open contact for output contact R2
42	Normally closed contact for output contact R2

## 7.2 Typical Connection Diagram

Example 1: With neutral. CT secondary 5A.

Example 2: Without neutral. CT secondary 1A.

## 8.0 Technical Data

---

### RATINGS

---

#### Auxiliary Supply

##### MK3000L-150D

Rated voltage : 30 ~ 120 V DC  
Operating voltage : 24 ~ 150 V DC

##### MK3000L-240AD

Rated voltage : 100 ~ 240 V AC or 140 ~ 340 V DC  
Operating voltage : 85 ~ 265 V AC or 110 ~ 370 V DC  
Rated frequency : 50 or 60Hz  
Operating frequency : 45 ~ 65 Hz

Power consumption : 8 VA max

#### Current Inputs

Rated current In : 1 or 5 A by connection  
Frequency : 50 or 60 Hz nominal  
Burden : < 0.025 VA (1A)  
Thermal withstand : < 0.3 VA (5A)

Thermal withstand : 4 x In continuous  
Thermal withstand : 40 x In for 2s  
Thermal withstand : 100 x In for 1s

#### Logic Inputs

Input type : Optically isolated  
Rated voltage : 20 ~ 380 V DC  
Rated voltage : 50 ~ 270 V AC  
Rated voltage : (Series resistor 18k Ohm, 2W required for >170 V AC / 240 V DC direct input)

#### Output Relay

##### Trip Contact Relay (R1), R2, IRF Relay

Rated voltage : 250 V AC/DC  
Contact arrangement : Change-over  
Continuous carry : 5 A  
Expected electrical life : 100,000 operations at rated load  
Expected mechanical life :  $5 \times 10^6$  operations

##### R3,R4

Rated load (resistive) : 5 A at 250 V AC  
Rated load (resistive) : 3 A at 30 V DC  
Expected electrical life : 100,000 operations at rated load  
Expected mechanical life :  $5 \times 10^6$  operations

---

### RECORDS

---

Fault Record : Up to 50 records.  
Event Record : Up to 250 records  
Alarm Record : Up to 30 records  
Disturbance Record : See *Setting Ranges - Disturbance Record*

---

## SETTING RANGES

---

### General

Phase CT primary : 1 to 10000 A. 1 to 1000: step 1; 1000 to 10000: step 5  
Phase CT Secondary, In : 1 or 5 A  
Earth CT primary : 1 to 10000 A. 1 to 1000: step 1; 1000 to 10000: step 5  
Earth CT Secondary, Ion : 1 or 5 A  
Frequency : 50 or 60 Hz

### Phase Overcurrent

I>? : Yes or No  
I> : 0.1 to 25 x In. \*Variable steps.  
NOTE : When delay type is IDMT, the maximum setting recommended should be 2.00 x In.  
I> Delay type : IDMT or Definite Time  
tI> : 0 to 100 s. \*Variable steps  
I> IDMT curve : Normal Inverse, Very Inverse, Extremely Inverse, Long-time Inverse,  
: Normal Inverse 1.3/10  
ktI : 0.01 to 1.00  
I>>? : Yes or No  
I>> : 0.5 to 40 x In. \*Variable steps  
tI>> : 0 to 100 s. \*Variable steps  
I>>>? : Yes or No  
I>>> : 0.5 to 40 x In. \*Variable steps  
I>>> Sample : Yes or No  
tI>>> : 0 to 100 s. \*Variable steps

### Earth Fault

Io? : Yes or No  
Io> : 0.02 to 2 x Ion. \*Variable steps  
NOTE : When delay type is IDMT, the maximum setting recommended should be 0.5 x Ion.  
Io> Delay type : IDMT or Definite Time  
tIo> : 0 to 100 s. \*Variable steps  
Io> IDMT curve : Normal Inverse, Very Inverse, Extremely Inverse, Long-time Inverse,  
: Normal Inverse 1.3/10  
ktIo : 0.01 to 1.00  
Io>>? : Yes or No  
Io>> : 0.1 to 10 x Ion. \*Variable steps  
tIo>> : 0 to 100 s. \*Variable steps  
Io>>>? : Yes or No  
Io>>> : 0.1 to 10 x In. \*Variable steps  
Io>>> Sample : Yes or No  
tIo>>> : 0 to 100 s. \*Variable steps

### Negative Sequence Overcurrent

I2? : Yes or No  
I2> : 0.1 to 40 x In. \*Variable steps  
NOTE : When delay type is IDMT, the maximum setting recommended should be 2 x In.  
I2> Delay type : IDMT or Definite Time  
tI2> : 0 to 100 s. \*Variable steps  
I2> IDMT curve : Normal Inverse, Very Inverse, Extremely Inverse, Long-time Inverse,

	Normal Inverse 1.3/10
ktI2	: 0.01 to 1.00
I2>>?	: Yes or No
I2>>	: 0.1 to 40 x In. *Variable steps
tI2>>	: 0 to 100 s. *Variable steps

### **Thermal Overload**

Thermal OL?	: Yes or No
Iθ>	: 0.1 to 3.00 x In. *Variable steps
Tθ	: 1 to 200 minutes. Step 1
k	: 1 to 1.5. Step 0.01
θ Trip	: 50 to 200%. Step 1%
θ Alarm	: 50 to 200%. Step 1%

### **Demand Alarm**

Demand Alarm?	: Yes or No
Idmnd>	: 0. 10 to 20 x In. *Variable steps
tIdmnd>	: 0.03 to 900 s. *Variable steps

### **Cold Load Pickup**

CLPU Level	: 100 to 500%.
CLPU tCL	: 0.1 to 600 s

### **Disturbance Record**

Records Number	: 6 x 3s, 4 x 4s, 3 x 5s, 2 x 7s, 1 x 9s
Pre-Time	: 0.1s to [record length - 0.1s]

### **Autoreclose**

Dead Time tD1-tD4	: 0.05 to 600s
Reclaim Time tR	: 0.02 to 600s
Inhibit Time tI	: 0.02 to 600s
Phase Cycles	: 0-4
Earth Cycles	: 0-4
Cycles	: 0-2 (0=Definitive trip, 1=trip on pickup, followed by reclose cycle, 2=no trip on pickup)

### **Inrush Blocking**

Inrush blocking?	: Yes or No
Inrush H2 ratio	: 10 to 35%
Inrush tReset	: 0 to 2s

### **Input**

Aux timer	: 0 to 600 s
TCS delay	: 0.1 to 10 s. *Variable steps

### **Output**

CBFP Delay	: 0.05 to 10.0 s. *Variable steps.
------------	------------------------------------

### **Communication**

Communication?	: Yes or No
Remote Set?	: Yes or No
Baud Rate	: 2400, 4800, 9600, 19200, 38400 or 57600bps
Parity	: None, Even or Odd

Stop Bit : 1 or 2  
 Relay Address : 1 to 255

### **CB Alarm**

CB Opening Time? : Yes or No  
 CB Opening Time : 0.05 to 1s  
 CB Closing Time? : Yes or No  
 CB Closing time : 0.05 to 1s  
 CB Operations? : Yes or No  
 CB Operations : 0-10000  
 $\Sigma$ Amps(n)? : Yes or No  
 $\Sigma$ Amps(n) : 0 to 4000MA  
 n : 1 or 2

\*Variable steps: 0.1-1.00: step 0.01; 1.00-20: step 0.1; >20: step 1

### **MEASUREMENT RANGE**

Phase, earth and negative sequence current Display : 0 to 999 kA. (Taking into account of CT Pri ratio)

#### Phase Current Secondary

5A input : 0 to 200 A  
 1A input : 0 to 40 A

#### Earth Current Secondary

5A input : 0 to 50A  
 1A input : 0 to 10A

Thermal θ : 0 to 9999%

Frequency : 20 to 80 Hz

### **CB Monitoring**

CB Opening Time : 0-65535ms (65.535s)  
 CB Closing Time : 0-65535ms (65.535s)  
 CB Operations : 0-99999  
 $\Sigma$ Amps(n) IL1-IL3 : 0-4000MA

### **ACCURACY**

Is: I>, I>> or I>>>

Ios: Io> or Io>>

<b>Element</b>	<b>Range</b>	<b>Trigger</b>	<b>Reset</b>	<b>Time deviation</b>
Phase overcurrent I>, I>>, I>>>	0.1 to 40 x In	Is ± 3% or 30mA whichever greater	0.95 x Is ± 2%	DT: ±2% +30ms  IDMT: ±5% +30ms (>1.2 x Is)
Earth fault overcurrent Io>, Io>>	0.02 to 10 x Ion	Ios ± 3% or 30mA whichever greater	0.95 x Ios ± 2%	DT: ±2% +30ms  IDMT: ±5% +30ms (>1.2 x Is)

Negative sequence overcurrent, I2>	0.1 to 40 x In	Is ± 5% or 30mA whichever greater	0.95 x Is ± 3%	DT: ±2% +30ms IDMT: ±6% +30ms (>1.2 x Is)
Thermal overload, Iθ>	0.1 to 3 x In			±5%

## **INSULATION**

High voltage dielectric withstand test IEC60255-5 : 2kV rms, 1 minute  
High voltage impulse test IEC60255-5 : 5kV, 1.2/50us

---

## **STANDARDS**

Complies with IEC 60255-26 standard	
Electrical fast transient IEC61000-4-4, power supply	: 4kV, 5kHz
Electrical fast transient IEC61000-4-4, other inputs	: 2kV, 5kHz
Surge IEC61000-4-5, IEC 60255-22-5	: 4kV common mode : 2kV differential mode
Electrostatic discharge IEC61000-4-2, air discharge	: 8 kV
Electrostatic discharge IEC61000-4-2, contact discharge	: 6 kV
1MHz burst disturbance IEC60255-22-1	: 2kV Common mode : 1kV Differential mode
Conducted Immunity IEC61000-4-6	: 10V rms @ 1kHz 80%AM, 0.15 to
Radiated Immunity IEC61000-4-3	: 10V/m 80Mhz to 1GHz @ 1kHz 80%
Conducted emissions	: EN 55011 Group 1 Class B
Radiated EM Field emission	: CISPR 11 Group 1 Class B

## **ENVIRONMENTAL CONDITIONS**

Temperature : -5°C to 55°C  
Humidity : 56 days at 93% RH and 40°C non-condensing

MECHANICAL

Mounting	: Panel mounting
Dimension (mm)	: 142(w) x 165(h) x 198(d)
Enclosure protection	: IP54 at the panel
Approximate weight	: 3kg

## 9.0 MODBUS Protocol

Both of the RS232 port on the front panel and the RS485 port on the rear terminals use MODBUS RTU protocol.

The RS232 front panel port is fixed to 38400bps, even parity, 1 stop bit, relay address 1.

The RS485 rear port communication setting is set by the COMMUNICATION Menu from the front panel.

### 9.1 MODBUS Functions

The MODBUS functions described below are used:

#### 0x03/0x04 Read Input/Holding Registers

These 2 commands have the same function

Request	Communication address	1 byte	0* to 255
	Function code	1 byte	0x03/0x04
	Starting Address	2 bytes	0x0000 to 0xFFFF
	Quantity of Registers	2 bytes	0x0001 to 0x007d (N)
	CRC	2 bytes	2 bytes CRC

Response	Communication address	1 byte	1 to 255
	Function code	1 byte	0x03/0x04
	Byte count	1 bytes	2 X N
	Quantity of Registers	N X 2 bytes	Value
	CRC	2 bytes	2 bytes CRC

Error	communication address	1 byte	1 to 255
	Error code	1 byte	0x83/0x84
	Exception code	1 bytes	0x01 or 02 or 03 or 04
	CRC	2 bytes	2 bytes CRC

#### 0x06 Write Single Register

Request	Communication address	1 byte	0* to 255
	Function code	1 byte	0x06
	Register Address	2 bytes	0x0000 to 0xFFFF
	Register value	2 bytes	Value
	CRC	2 bytes	2 bytes CRC

Response	Communication address	1 byte	1 to 255
	Function code	1 byte	0x06
	Register value	2 bytes	value
	CRC	2 bytes	2 bytes CRC

Error	Communication address	1 byte	1 to 255
	Error code	1 byte	0x86
	Exception code	1 bytes	0x01 or 02 or 03 or 04
	CRC	2 bytes	2 bytes CRC

## 0x10 Write Multiple Registers

Request	Communication address	1 byte	0* to 255
	Function code	1 byte	0x10
	Starting Address	2 bytes	0x0000 to 0xFFFF
	Quantity of Registers	2 bytes	0x0001 to 0x007b (N)
	Byte count	1 byte	2 X N
	Register value	N X 2 bytes	Value
	CRC	2 bytes	2 bytes CRC
Response	Communication address	1 byte	1 to 255
	Function code	1 byte	0x10
	Quantity of Registers	2 bytes	0x0001 to 0x007b (N)
	CRC	2 bytes	2 bytes CRC
Error	Communication address	1 byte	1 to 255
	Error code	1 byte	0x90
	Exception code	1 bytes	0x01 or 02 or 03 or 04
	CRC	2 bytes	2 bytes CRC

\*Note: communication address 0 is a broadcast command to all the slaves. The slave will not respond a broadcast command.

## 9.2 MODBUS Register

\*Note: For MK3000L, Device type – main is 00 02 03. Device type –sub is 00.

Address	Parameter	Format	Units and Scale	Range
Dec	Hex			
<b>Product information. Read only. Function 03h or 04h</b>				
0	0000			F1 ASCII '00'
1	0001	Device type - main*	F1 ASCII	'02'
2	0002		F1 ASCII	'03'
3	0003	Device type - sub*	F1 ASCII	'00'
4	0004	Version number -main	F1 ASCII	'XX'
5	0005		F1 ASCII	'XX'
6	0006	Version number -sub	F1 ASCII	'XX'
7	0007		F1 ASCII	'XX'
<b>Measurements and relay status. Read only. Function 03h or 04h</b>				
16	0010	Relay status	F2 Bit field	Bit 0 - 15
17	0011	Relay LED status	F3 Bit field	Bit 0 - 11

- 4: tlo>>
- 5: Thermal Overload
- 6: tAux 1
- 7: tAux 2
- 8: Reserved
- 9: Reserved
- 10: Remote trip
- 11: tl2>
- 12: tl2>>
- 13: tlo>>>

## Event Record

Address	Parameter	Format	Units and Scale	Range
Dec	Hex			
<b>Event Records. Read only. Function 0x03 or 0x04</b>				
8192	2000	Record 1		
8193	2001	Record 2		
:	:			
:	:			
8441	20F9	Record 250		
<b>Alarm Records. Read only. Function 0x03 or 0x04</b>				
12288	3000	Record 1		
12289	3001	Record 2		
:	:			
:	:			
12317	301D	Record 30		

Each Event or Alarm Record consists of 8 words:

Word Number	Description	Format	Units and scale	Range
1	Year	F7	year	0 - 199 (as 2000 - 2199)
2	month, day	F10	month,day	0 - 12, 0 - 31
3	hour, minute	F11	hour, minute	0 - 23, 0 - 59
4	Milliseconds	F7	ms	0 - 59999
5	Record code	See below	record code	
6	Record value	See below	record value	
7	Record fault value	F8	0.01 Ampere	0-9.99x10 <sup>7</sup> (999kA)
8	Record fault value			

### Word number 5:

Event and Alarm Record code  
 0: None  
 1: I> start  
 2: tl> trip  
 3: I>> start  
 4: tl>> trip  
 5: I>>> start  
 6: tl>>> trip  
 7: lo> start  
 8: tlo>> trip  
 9: lo>> start  
 10: tlo>> trip  
 11: Remote trip  
 12: Remote acknowledge  
 13: Remote reset  
 14: Setting change  
 15: Remote thermal state reset  
 16: Maintenance mode  
 17: Thermal alarm  
 18: Thermal overload  
 19: TCS alarm  
 20: Group change  
 21: tAux 1  
 22: tAux 2  
 23: tl> reset  
 24: tl>> reset  
 25: tl>>> reset  
 26: tlo> reset  
 27: tlo>> reset  
 28: Relay latching  
 29: Relay unlatching  
 30: Input activate  
 31: Input deactivate  
 32: Idemand alarm  
 33: General starting

34: Cold load function starting

35: I2> start

36: tl2> trip

37: I2>> start

38: tl2>> trip

39: tl2> reset

40: tl2>> reset

41: lo>>> start

42: tlo>>> trip

43: tlo>>> reset

44: CB Fail

45: Recloser setting error

46: Reclose successful

47: Recloser final trip

48: Recloser locked

49: CB closed by autorecloser

50: Control CB close (input & button)

51: CB remote close

52: CB control open (button)

53: CB Alarm

54: No CB Close Output

55: Inrush blocking

### Word number 6:

Event and Alarm Record value

If code is I> start, tl> trip, I>> start, tl>> trip, I>>> start, tl>>> trip,  
 Demand alarm:

Bit 0: IL1

Bit 1: IL2

Bit 2: IL3

If code is Setting change:

Value is the register address of  
 setting being changed

If code is thermal alarm, thermal overload

Value is the % of thermal alarm or  
 overload threshold:

If code is Group change:

0: group 1

1: group 2

If code is output relay latching, output  
 relay unlatching:

Bit 0: Output relay 1

Bit 1: Output relay 2

Bit 2: Output relay 3

Bit 3: Output relay 4

If code is input activate, input deactivate:

Bit 0: Input 1

Bit 1: Input 2

If code is tAux 1, tAux 2:

0=Alarm

0x8000=Trip

### Word number 7,8:

Fault current value for  
 tl>,tl>>,tl>>>,tlo>,tlo>>,tlo>>>,tl2>,tl2>>

### Steps to read Disturbance records:

1. Read 3100 to find out number of disturbance records available
2. Select one of the record number and channel by reading 3200-3705.
3. Read from 4000 the selected record number and channel until total number in the mapping read.
4. Use the information obtained from 2 for plotting also.

Address	Parameter	Format	Units and Scale	Range
Dec	Hex			
<b>Number of disturbance records available. Read only. Function 0x03 or 0x04</b>				
12544	3100	Number of disturbance records available		

Address: 3100

Number of disturbance records available

Word Number	Description	Format	Units and scale	Range
1	No of disturbance records available	F7		0-5
2	Rec 1 Available, Acknowledge	F7		0-1, 0-1

### Address: 3200 - 3705

Selection of the disturbance record and channel

Word Number	Description	Format	Units and scale	Range
1	No of samples in the mapping	F7		
2	Sample number in pre-time	F7		
3	Sampling rate	F7	per second	
4	Nominal frequency	F7	Hz	0-100
5	Trigger point sample year	F7	year	0 - 199 (as 2000 - 2199)
6	Trigger point sample month, day	F10	month,day	0 - 12, 0 - 31
7	Trigger point sample hour, minute	F11	hour, minute	0 - 23, 0 - 59
8	Trigger point sample milisecond	F7	ms	0 - 59999
9	Phase CT primary current	F7	Ampere	1-10000
10	Earth CT primary current	F7	Ampere	1-10000
11	Phase CT secondary current	F7	Ampere	1-5
12	Earth CT secondary current	F7	Ampere	1-5
13	IL1 channel multiplier	F7	/2048	
14	IL2 channel multiplier	F7	/2048	
15	IL3 channel multiplier	F7	/2048	
16	Io channel multiplier	F7	/8192	

All return 0 if record is empty

PC to calculate first sample date and time by using trigger point date\_time - pre\_time setting.

There are 5 analog and 7 digital channels in the mapping.

**No of samples in the mapping:** The total samples in the record for each channel.

Phase primary CT ratio applies to IL1,IL2,IL3 channels. Earth primary CT ratio applies to Io channel.

The secondary CT ratio is always 5.

**IL1, IL2, IL3, Io channels:** The value is signed 16 bits word equivalent to the ADC value

**Frequency channel:** Measured frequency value x 100Hz.

**Digital input and outputs channel:** 16 Bits word

Bit 0: Input 1  
Bit 1: Input 2  
Bit 2-Bit 7: Unused  
Bit 8: Output Relay 1  
Bit 9: Output Relay 2  
Bit 10: Output Relay 3  
Bit 11: Output Relay 4  
Bit 12-Bit 14: Unused  
Bit 15: Output Relay IRF

IL1, IL2, IL3 channel multiplier: This value divided by 204800 to get channel multiplier.

Io channel multiplier: This value divided by 819200 to get channel multiplier.

Frequency channel multiplier: 0.01

## 9.3 MODBUS Mapping Format

CODE	DESCRIPTION	
F1	2 bytes ASCII character	
F2	Unsigned integer – Relay status Bit 0: Eeprom data failure Bit 1: Calibration failure Bit 2: Clock loss Bit 3: Clock error Bit 4: Adc error	Bit 11: Back port (RS485) unread fault record Bit 12: Front panel (RS232) unread fault record Bit 13: Front panel/Back port communication Bit 14: Back port unread alarm record Bit 15: Front panel unread alarm record
F3	Unsigned integer – Relay LED status Bit 0 and Bit 1: Trip LED. 1=on, 2=blink Bit 2 and Bit 3: Alarm LED. 1=on, 2=blink Bit 4: LED1 1=on, 0=off	Bit 5: LED2 1=on, 0=off Bit 6: LED3 1=on, 0=off Bit 7: LED4 1=on, 0=off
F4	Unsigned integer – Input status Bit 0: Input 1 (0=off, 1=on) Bit 1: Input 2 (0=off, 1=on)	
F5	Unsigned integer – Output relay status Bit 0: Output 1 (0=off, 1=on) Bit 1: Output 2 (0=off, 1=on) Bit 2: Output 3 (0=off, 1=on) Bit 3: Output 4 (0=off, 1=on)	
F6	Unsigned integer – Miscellaneous A numeric value representation of certain options or functions. Refer to 'range' column of the register for detail.	
F7	Unsigned integer A numeric value of certain units Eg. 12 may represent 12% or 12minutes Refer to individual resistor's 'Units and 'range' for detail	
F8	Unsigned long integer – A numeric value of certain units	
F9	Unsigned integer – Remote command High byte: 1: Reset alarm/trip (also acknowledge and delete alarm record) 2: Acknowledge alarm/trip 3: Reset display to main page 4: Reset thermal state 5: Reset maximum and average measurement value 6: Remote trip  Low byte: For high byte=3: set to main display page 0-3 For high byte=8,9 and 10: 0=Delete all record, n: delete record n	7: Reset panel password 8: Delete fault record 9: Delete event record 10: Delete alarm record 11: Start Disturbance Record 12: Remote CB close 13: Reset CB Monitor value
F10	Unsigned integer High byte: month Low byte: day	
F11	Unsigned integer High byte: hour (24 hour format) Low byte: minute	
F12	Unsigned integer – Date and time format for relay display only High byte: Date format, 0=DD/MM/YYYY, 1=MM/DD/YYYY Low byte: Time format, 0=12 hour, 1=24 hour	
F13	Unsigned integer – Change Group by... 0=Change group by menu, 1=change group change by level of digital input	

F14	Unsigned integer A scaled numeric value of certain units Eg. 123 may represent 1.23A or 1.23s Refer to individual register's 'Units and Scale' and 'range' for detail	
F15	Unsigned integer – Cold Load Pick-up element Bit 0: tl> Bit 5: tl>>> Bit 1 tl>> Bit 6: Thermal overload Bit 2: tl>>> Bit 7: tl2> Bit 3: tlo> Bit 8: tl2>> Bit 4: tlo>>	
F16	Unsigned integer – Input n reset option (For input function set as reset) Bit 0: 0= Not to reset trip/alarm, 1=to reset trip/alarm Bit 1: 0= Not to reset thermal state, 1=to reset thermal state	
F17	Unsigned integer – Input n Blocked element (For input function set as blocking) Bit 0: tl> Bit 5: tl>>> Bit 1 tl>> Bit 6: Thermal overload Bit 2: tl>>> Bit 7: tl2> Bit 3: tlo> Bit 8: tl2>> Bit 4: tlo>>	
F18	Unsigned integer – Relay n link element 1 Bit 0: l> Bit 7: Aux 1 Bit 1 l>> Bit 8: Aux 2 Bit 2: l>>> Bit 9: TCS Bit 3: lo> Bit 10: Idemand Bit 4: lo>> Bit 11: Remote trip Bit 5: lo>>> Bit 12: l2> Bit 6: Thermal overload Bit 13: l2>>	
F19	Unsigned integer – Relay n link element 2 (Funcion=Start/other) Bit 0: CB close Bit 1: CB Fail Bit 2: Recloser run Bit 3: Recloser block	
F20	Unsigned integer – LED n link element 1 Bit 0: Enable Bit 8: tl> Bit 1: l> Bit 9: lo>> Bit 2 tl> Bit 10: tl>> Bit 3: l>> Bit 11: lo>>> Bit 4: tl>> Bit 12: tl>>> Bit 5: l>>> Bit 13: tl2> Bit 6: tl>>> Bit 14: tl2>> Bit 7: lo> Bit 15: Unused	
F21	Unsigned integer – LED n link element 2 Bit 0: Input 1 Bit 8: Thermal overload alarm Bit 1: Input 2 Bit 9: Thermal overload trip Bit 2: Unused Bit 10: CB Fail Bit 3: Unused Bit 11: Recloser run Bit 4: Aux 1 Bit 12: Recloser block Bit 5: Aux 2 Bit 13: TCS Alarm Bit 6: Unused Bit 14: Unused Bit 7: Unused Bit 15: Unused	
F22	Unsigned integer – Input function 0=None, 1=aux1, 2=aux2, 3=Reset, 4=Blocking, 5=TCS, 6=Grp select, 7=CLPU, 8=Sync clock, 9=CB status, 10=Blk autoreclose, 11 Control close, 12=Start disturbance record Bit 7: 0=Active high, 1=Active low	

F23	<p>Unsigned integer – Disturbance record number</p> <p>0=None 1=6 Records X 3 seconds 2=4 Records X 4 seconds 3=3 Records X 5 seconds 4=2 Records X 7 seconds 5=1 Records X 9 seconds</p>
F24	<p>Unsigned integer – Autoreclose Cycle Allocation</p> <p>Cycles 4 3 2 1 XXXX (bit 0-1:cycle 1, 2-3: cycle 2, 4-5: cycle 3, 6-7 cycle 4)</p> <p>Where X equals to:</p> <p>0 (00)=no action on autorecloser: definitive trip 1 (01)= trip on pickup-up, followed by reclosing cycle 2 (10)=no trip on pickup</p>
F25	<p>Unsigned integer – Relay status 2</p> <p>Bit 0: Recloser run Bit 1: Recloser locked Bit 2: Disturbance recorder running</p>
F26	<p>Unsigned integer – Inrush Blocking Element</p> <p>Bit 0: tl&gt; Bit 1 tl&gt;&gt; Bit 2: tl&gt;&gt;&gt; Bit 3: tlo&gt; Bit 4: tlo&gt;&gt; Bit 5: tlo&gt;&gt;&gt; Bit 6: tl2&gt; Bit 7: tl2&gt;&gt;</p>

#### Revision History

V1.0 May 2017	First version
V1.1 Jul 2020	Product photo correction. ANSI code to CB monitoring/control and blocking logic added.
